| <b>Beschreibung / Besonderheiten</b><br>Im Nordwesten des Barther Stadtholzes auf einer meist bewaldeten Binnendüne gelegene reich strukturierte (Formenvielfalt des Wacholder) Zwergstrauch-Wacholderheide;<br>Das Gelände ist auffällig dünn.<br>Das Gebiet durchschneidet zentral ein unversiegelter Fahrweg, welcher zu den im Westen angrenzenden Gehöften ("Drei Katen") führt, kleine schlecht instandgehaltene Fußwege mit zerfallenen Begrenzungen führen in das Heide-Gebiet.<br>Am Fahrweg auffälliger Hexenbesen (ca. 2 m Durchmesser) in einer älteren Kiefer.<br>Nach Osten schließt sich ein dichtes Blaubeeren-Drahtschmielen-Wacholdergebüsch an, welches in einen z. T. den Biotopkomplex umgebenden Wacholder-Kiefern-Hudewald übergeht (letzterer besitzt keinen Schutzstatus und wurde nicht kartiert).<br>Der zunehmende Einfluß der Drahtschmiele verdrängt allmählich die Heidekraut-Vegetation und wird langfristig zum Verschwinden der Zwergstrauch-Wacholderheide führen.<br>Eine Beweidung mit Schafen wäre unbedingt erforderlich. |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                        |             |   |                            |   |   |                                                               |   |   |  |  |  |   |  |  |  |  |  |  |  |  |   |   |   |   |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                    |  |   |   |   |   |   |   |   |   |   |   |   |
