| <b>Beschreibung / Besonderheiten</b><br>Im südlichen Semlower Holz in einer Senke im Buchenhochwald ausgeprägter Birken-Erlenbruch mit zahlreichen Grauweiden. Die Senke ist überstaut, kleinflächig treten offene Wasserflächen auf. Röhrichte aus Großem Wasserschwaden (Glyceria maxima), Riede aus Steif- und Walzensseggen (Carex elata, C. elongata) prägen die Krautschicht. Insbesondere randlich sind Torfmoose in geringer Deckung ausgebildet. Die Fläche enthält zahlreich u.a. Sumpf-Kalla (Calla palustris, BAV), Gelbe Schwertlilie (Iris pseudacorus, BAV), während Wiesensegge (Carex nigra, RL-3) und Schnabelsegge (Carex rostrata, RL-3) vereinzelt auftreten. Das Substrat der Fläche besteht aus degradierten, mesotrophen, nassen bis feuchten Torfen.<br>Die Fläche ist durch großräumige Entwässerung gefährdet, die für den Erhalt der Fläche reduziert werden sollte.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |           |                                                       |                                                       |                                                                                                               |                                            |                          |                                                                   |                                                |                                                           |                                                                   |                                                     |                                                                            |                                                      |                                                                    |                                                          |                                                                                                                                                                                                 |                                                                  |                                                                        |                                                                    |                                                             |                                                                 |                                                        |                          |   |  |  |                                                                                                                                                                                                                                                                                                                                                                                |  |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |
