| Erlen-eschenwald im Wald nördlich vom Hohen Holz in vermoorter Senke. Das Biotop grenzt großflächig an Laubmischwald sowie eine junge Grau-Erlen-Aufforstung. Als Gehölze dominieren Eschen über Erlen. Die Bäume sind mittelalt und stocken auf feuchtem Antorf. In der spärlichen Krautschicht ist regelmäßig Winkel-Segge vertreten. Die geringen Vorkommen von Bitterem Schaumkraut und Milzkraut könnten auf einen leichten Quelleinfluß hinweisen. |  |  |  |  |  |                                                       |  |  |  |                                        |  |                          |  |                                                                               |  |  |  |                 |  |  |  |
