| <b>Beschreibung / Besonderheiten</b><br>Heterogenes Feuchtgebiet mit Weidengebüsch, Naßwiese, Schilfröhricht, einem Pappel - Gehölz und Bodenaufschüttungen mit Ruderalflur.<br>Durch zahlreiche Entwässerungsgräben schwanken die Wasserstände der Feuchtbiotope. Trotzdem sind im Weidengebüsch und auf der seggenreichen Naßwiese ganzjährig offene Wasserstellen vorhanden.<br>Die Wertigkeit des Biotopes wird durch das Nebeneinander von vielfältigen Standortverhältnissen erhöht.<br>Substrat in den Feuchtgebieten: "Torf", in den Aufschüttungen: "Lehmiger Sand", Kies und Bauschutt.<br>Geschützte Pflanzen: Wiesen-Schaumkraut, Zweizeilige Segge, Blaugrüne Segge, Wiesen-Segge, Breitblättriger Sitter, Wasser-Schwertlilie, Großes Zweiblatt, Kuckucks-Lichtnelke, Kleiner Baldrian und Wiesen-Margarite. |   |                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |   |                                                                                                  |   |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |  |  |  |  |   |   |  |  |  |  |  |  |                                                                                                                                                                                                                                                    |  |   |   |   |   |   |   |   |   |   |   |   |
