| <b>Beschreibung / Besonderheiten</b><br>Moorbirkenbruch am Ibitzgraben südl. Düvier. Diese aufgelassene Moor- Wiesenfläche ist heute weitgehend von Moorbirken eingenommen. Es ist hier ein feuchter, eutropher Bruchwald entstanden, der in seinem Kern noch mesotrophe Verhältnisse aufweist. Das Zentrum wird von einem Pfeifengras- Moorbirkenbruch eingenommen. Die stark entwickelte Krautschicht wird überwiegend von Großseggen gebildet. Die Baumschicht besteht überwiegend aus 20-30 Jahre alten Moorbirken mit vereinzelt Faulbaum und einigen Weidengehölzen. Der Biotop wird durch Gräben und Randgräben entwässert. Das Substrat enthält überwiegend nassen bis sehr feuchten, eutrophen, ungestörten Torf. |                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                              |
