| <b>Beschreibung / Besonderheiten</b><br>Das Biotop umfaßt Teile des "Ladebower Moores". Es ist ein Durchströmungsmoor, das etwa 1,5 km nördlich von Greifswald liegt und als NSG geschützt ist. Bedingt durch Entwässerung bzw. den Abbau von Torf herrschen degradierte Torfe vor, die feucht bis nass sind, die Bedingungen sind überwiegend mesotroph. Das Biotop wird von z.T. extrem tiefen Randgräben (so nach Süden hin) umgeben, dahinter folgt Intensivgrünland bzw. Acker. Nach Osten schließt sich die "Ladebower Moorweide" an, die extensiv beweidet wird. Im Westen schließt sich der im Landkreis OVP liegende Biotopteil an.<br>Der südlichen Biotopteil wird von ausgedehnten Schilfröhrichten geprägt, in deren Unterwuchs Torfmoose in dichten Decken vorkommen können, sowie Sumpfreitgras und Gilbweiderich, so daß man das Röhricht als Stadium eines Basen- bzw. Kalk-Zwischenmooses ansehen kann. In der Nähe von kleineren Torfstichen kommen junge Moorbirken auf. Im nördlichen Biotopteil um die großen Torfstiche ("Hartmannsche Teiche") kommen schilffreie Birken-Erlenbruchwälder und Grauweidenfeuchtgebüsche vor, teilweise auch in ihrer entwässerten Form mit Brennesseln bzw. Himbeeren im Unterwuchs. Am nördlichen Rand des Biotops liegt eine mesotrophe Feuchtwiese mit Pfeifengras, Rasenschmiele, Schilf, Steifsegge und Blutweiderich vor. Am Ufer der Torfstiche kommen als große Besonderheit Schneidenröhrichte und Röhrichte des Schmalblättrigen Röhrkolbens vor. Seltenheiten wie Breitblättriges Knabenkraut, Rundblättriger Sonnentau, Färber-Scharte und Teufelsabß werden im Biotop beobachtet, das auch in ornithologischer Hinsicht von großer Bedeutung ist. Möglicherweise als Folge der 1993 eingeleiteten Wiedervernässung (Abriegelung von Entwässerungsgräben) sterben einzelne Baumgruppen ab. |                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |   |                                                   |   |                                                                                                                                                                                                                                                                                    |   |   |   |   |                                                                                                                                                                                   |   |   |   |   |   |   |   |   |   |                                                                                                                                                                                         |   |                                                                                                                                                                                                                                      |                                                                                                                                            |   |   |   |   |   |   |                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                  |   |   |   |   |   |                       |   |   |   |  |   |   |  |   |   |  |   |   |  |  |   |  |  |   |  |  |   |  |  |   |  |  |  |  |  |                              |  |  |  |
