| <b>Beschreibung / Besonderheiten</b><br>Im südlichen Teil eines mäßig entwässerten und extensiv genutzten Niedermoorgrünlandes bei Lubmin befindet sich diese Rohrglanzgras-Waldsimsen-Feuchtwiese. Nebn den beiden namensgebenden Arten kommen auch die Behaarte Segge, Kriechhahnenfuß und Gemeines Rispengras häufig vor. Außerdem drängen Arten einer Staudenflur vom Weidezaun, der das Biotop südlich begrenzt, in die Fläche. Dies sind z.B. Distel, Hohlzahn, Rauhaariges Weidenröschen und Hopfen. Die Umgebung des Biotops, eine zum Zeitpunkt der Begehung aufgelassene Rohrglanzgraswiese, ist relativ störungsarm. Das Substrat ist vererdeter Torf, die Trophie eutroph.                                                                                                                                                       |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
