| <b>Beschreibung / Besonderheiten</b><br>Zu Vegetationseinheiten: rasenschmielenreicher Wasserdost-Erlenbruchwald, Sumpfreitgras-Schilf-Eschenwald, rasenschmielenreicher Sumpfreitgras-Erlen-Eschenwald, Steifseggen-Sumpffarn-Erlenbruchwald, Rasenschmielen-Brennnessel-Erlenbruchwald, Himbeer-Brennnessel-Erlen-Eschenwald, Wasserschwertlilien-Erlen-Grauweidenbüsch, Brennnessel-Sumpfreitgras-Sumpfschilfnied, <p>Der ausgedehnte großflächige Bruchwaldkomplex liegt innerhalb eines großen Waldgebietes das auf einer Sandinsel innerhalb des vermoorten Ziesetals liegt. Innerhalb der bewaldeten Sandinsel sind einige flach vermoorte - jetzt aber entwässerte- Senken eingestreut, die heute durch Antorf bzw. degradierte Torfe gekennzeichnet sind. Die Biotopfläche ist daher in der Regel von stärker entwässerten Bruchwaldbereichen umgeben, an die sich mineralbodenbestimmte Laub- und Nadelforste anschließen. Als Wasserstufe herrscht feucht vor, stellenweise kommen sehr feuchte und auch nasse Bereiche vor. Großflächig wird die Baumschicht durch Erlen bestimmt, zwischen denen immer wieder einzelne Moorbirken eingestreut sind. Lokal löst die Esche die Erle komplett ab oder es bestehen Erlen-Eschen-Mischbestände. Eine ausgeprägte Strauchschicht fehlt meistens, die Krautschicht ist dagegen üppig ausgebildet. Auffällig ist das noch kleinflächige Vorkommen von Japanischem Staudenknochen und Topinambur am Rand des Biotops innerhalb des Eschenwaldes. Zur Erhaltung des Biotops und zur Verminderung der Torfmineralisation sollten Wiedervernässungsmaßnahmen eingeleitet werden und alle noch bestehenden Entwässerungsgräben (bei der Begehung nur wenige Gräben erkennbar) verschlossen werden.</p> |                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |   |                                                      |                       |                                   |                                          |                            |                                        |                  |                                           |                        |                                               |                                |                                               |                                |                                    |                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |   |   |   |   |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |   |   |   |   |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |
