| <b>Beschreibung / Besonderheiten</b><br>Unterhalb des Zieseberges bei Wolgast befindet sich eine gemähte, nährstoffreiche Feuchtwiese, in unmittelbarer Nähe der Bahnstrecke. Die Fläche ist entwässert, von einem flachen Graben durchzogen und ursprünglich Bestandteil des Küstenüberflutungsmoores am Peenestrom. Sie geht in Richtung Bahnstrecke in ein Nachtschatten-Schilfröhricht über, das aber ebenfalls in diesem Jahr abgemäht wurde. In der Wiese dominieren Zweizeilige Segge und Weißes Straußgras (Zweizeilenseggen-Riedwiese). |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                        |                                        |                                                                                                                                                |                                                                                                                                            |   |                                                                                                             |   |   |   |                                                                                                                                             |                                                                                                              |   |                                                                                                                          |   |   |                                                                                               |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                       |  |  |  |   |   |   |   |   |   |   |   |   |   |   |   |   |                       |  |  |  |
