**Beschreibung / Besonderheiten**  
Die begründete und vertiefte Maurine wird im Nordteil des Biotopes durch Mädesüß-Erlen-Quellwald begleitet.  
Im südlichen Bereich herrschen Waldbiotop vor, deren Waldränder mit Seggen-Rieden, Schilf- und Rohrglanzgras-Röhrichten verzahnt sind. Den Feuchtbiosphäre prägt ein Sumpfschilf-Erlen-Bruchwald neben dem Hexenkraut-Erlen-Eschenwald.  
Oft siedelt ein Wasserschilf-Röhricht im Bach, der ansonsten von Wasserpflanzen frei ist. Die Vegetationseinheiten sind auf feuchten bis sehr feuchten, teils quelligen Torfen und vererdeten Torfen ausgebildet.

Bem.: Dieser Bogen wurde im Rahmen von Kreisgrenzen-Anpassungen aus 0403-421B4021 gedoppelt!  
Die Beschreibung bezieht sich auf die gesamte Biotopfläche. 10.06.2009, J. Schubert
