| <b>Beschreibung / Besonderheiten</b>      |  |  | Mesotropher Birken-Erlen-Bruchwald inmitten einer Ackerfläche nordwestlich Hoikendorf. Der eigentliche Bruchwald ist von einem breiten Randsumpf umgeben. Zwischen dem Randsumpf und dem umgebenden Acker tritt ein trockenerer Brennessel-Grauerlenwald auf. Der Bruchwald ist reich an Pfeifengras und Torfmoosen. Er dürfte wohl durch Eutrophierung und Entwässerung eines Zwischen Moores entstanden sein. Es sollte um das Biotop ein Randstreifen angelegt werden. |  |  |  |  |  |  |  |                                                                                                                                                                                                           |  |  |  |  |  |                 |  |  |  |  |  |
