| <b>Beschreibung / Besonderheiten</b><br>Am Ostrand der Aufrastniederung, ca. 200 m nordwestlich Recknitz kommt eine Feuchtwiese auf den überwiegend feuchten, eutroph-reichen, degradierten Torfen vor. Die Wiese wird einerseits durch Bestände mit Dominanz von Sumpfschilf und Zweizeiliger Segge geprägt, als auch durch Rohrglanzgras-Sumpfschilf-Bestände.<br>Weiterhin treten verschiedene Gräser, Kräuter und Hochstauden in Erscheinung. Die Niederung wird großräumig entwässert. Eine Anhebung der Wasserstände wäre für das Biotop von Vorteil. Außerdem sollte weiterhin eine extensive Nutzung erfolgen. |   |                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                         |                                                                                        |   |                          |   |   |                                                                                                  |                                                                               |   |   |   |   |   |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                              |  |   |   |   |   |   |   |   |   |   |   |   |   |   |                   |  |
