Ganzjährig offene Wasserflächen werden von Wasserlinse und Wasserfeder besiedelt. Daneben wachsen Großseggenbestände und Flatterbinsen. Teilweise sind die Senken durch Gräben oder Verrohrung verbunden. Die Anhöhen der Kessellage sind mit Birken und Buchen bestockt. |                                             | <b>Wertbestimmende Kriterien</b>  |              | Artenreichtum (Flora)<br>Vorkommen seltener / typischer Tierarten<br>seltener / gefährdeter Pflanzenbestand<br>seltene / gefährdete Pflanzengesellschaft<br>natürliche / naturnahe Ausprägung des Biotops<br>gute Ausbildung eines halbnatürlichen Biotops<br>typische Zonierung von Biotoptypen<br>Struktur- und Habitatreichtum |             | vielfältige Standortverhältnisse<br>historische Nutzungsformen<br>aktuelle Nutzung<br>Flächengröße / Länge<br>Umgebung relativ störungsarm<br>landschaftsprägender Charakter<br>Trittsteinbiotop / Vernetzungsfunktion |            |  |                  |  |                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                |  |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |  |  |  |                                                                                                                                               |  |   |   |   |                                                                                                                                                         |  |   |   |   |   |
