| <b>Beschreibung / Besonderheiten</b><br>Innerhalb eines Laubwaldgebietes hat sich innerhalb eines stark degradierten Sauer-Zwischenmoores ein "Restbiotop" auf schwach eutrophen bis eutrophen feuchten degradierten Torfen erhalten. Der Südteil (größere Biotopteil) wird als Pflegemaßnahme gemäht. D. h., es handelt sich um eine Sumpfschilf-Sumpfreitgras-Feuchtwiese, welche reich an Kohlratzdistel (Nordteil) bzw. Sumpfkatzdistel (Südteil) ist. Brennnessel kommt stetig vor. Das Mähgut wurde am Rand bzw. auf flachen Wällen auf der Fläche abgelagert. Für die Wirksamkeit weiterer Pflegemaßnahmen ist unbedingt der Wasserstand anzuheben. Der Nordteil des Biotopes wird von einer Gilbweiderich-Sumpfschilf-Hochstaudenflur mit Sumpfkatzdistel, Sumpfschilfstrang, Pfeifengras, aber auch Rohrglanzgras, Springkraut und Stechem Hohlzahn eingenommen. Eine beginnende Verbuschung mit Faulbaum setzt ein. Auch ein Sumpfschilf-Birken-Grauweiden-Feuchtgebüsch sowie einzelne mittelalte Birken (BA < 1 %) sind vorhanden. Großflächig wird der Biotop von Nadelwald, kleinflächig von Laubwald und Ruderalflur umgeben. |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |   |                                                |                  |                                                                                                                                                                                                                        |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |                                                                                                                      |  |  |  |  |  |                                 |  |                                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                |  |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |
