| <b>Beschreibung / Besonderheiten</b><br>Innerhalb einer Ackerbrache hat sich auf eutrophen, sehr feuchten, degradierten Torfen ein artenarmes Sumpfschilf-Ried ausgebildet. Ein Graben durchzieht den langgestreckten Biotop von Nord nach Süd (ist z.T. auch Biotopgrenze). Kleinflächig ist auch ein Rispenseggen-Bultried (Verlandungsried) vorhanden. Ein Ruderalflursaum (z.T. Böschung) trennt den Biotop vom angrenzenden Acker. |  |                  |  |                                                                                                                                                                                                                                                                                                                         |  |  |                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
