| <b>Beschreibung / Besonderheiten</b><br>Am Rand einer überwiegend stark entwässerten Niederung hat sich eine ca. 500 m² große Feuchtwiese auf eutrophen feuchten degradierten Torfen erhalten. Es handelt sich um eine sumpfseggen- bzw. waldsimsendominante Feuchtwiese, welche reich an Kohlkratzdistel und Süßgräsern ist (Rispengras, Wiesenfuchsschwanz, Quecke). Der Biotop wird wie das umliegende Grünland als extensive Mähwiese genutzt. |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |                         |  |  |  |                         |  |  |  |                         |  |  |  |
