| <b>Beschreibung / Besonderheiten</b><br>Brachliegendes Feuchtgrünland am Ostrand des "Nedderholtes" aus dem sich ein Sumpfschilfbiosphäre mit Tendenz zur Hochstaudenflur auf feuchtem Torfstandort entwickelt hat. Neben Sumpfschilfbiosphäre ist Bachnelkenwurz stark vertreten. Stellenweise kommt Brennessel zahlreich vor. Daneben findet sich öfter Mädesüß und vereinzelt Kohldistel. Am Rand zum Graben vor dem Wald grenzt das Biotop an Schilf-Landröhricht. Zum Acker hin ist es mit ruderalisiertem Rohrglanzgras-Grünland und frischem queckenreichem Grünland auf mineralischen und antorfigen Standorten verzahnt.                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |                                        |                                                                                                                            |                                                                                                                                                      |                                                                                                                                                   |   |   |   |                                                                                                                            |   |   |   |   |   |   |   |                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                        |   |   |   |   |   |  |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |   |   |   |   |   |   |   |   |  |  |   |  |  |  |  |  |  |  |  |  |
