| Beschreibung/ Besonderheiten:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |  |                                                                                                                                                                                                                                                                            |  |  |  |  |  |                                                                                                                                                                                                 |  |                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |                                                                                                                                  |  |                          |  |                  |  |  |  |                    |  |  |  |  |  |
| Nahe der Trebel befindet sich im Bereich längerfristig nicht mehr genutzter Flächen auf eutrophen feuchten bis nassen und wahrscheinlich zeitlich überstauten degradierten Torfen ein strukturreicher Feuchtbiotopkomplex. Flächenmäßig dominiert ein Nachtschatten- Grauweiden- Feuchtgebüsch, teilweise prägt Sumpfssegge die überwiegend lückige Krautschicht. Ein großer Teil des westlichen Biotopendes ist durch flache Torfstiche reliefiert worden, die dazwischenliegenden flachen Dämme verlaufen in Nord- Süd- Richtung. Einzelne Lorbeerweiden sind vorhanden. Verzahnt ist das Feuchtgebüsch mit einem Schilf- Landröhricht (Zaunwinden- bzw. Schwadenreich ausgebildet). Besonders große Schilfbereiche finden sich im östlichen Biotopenteil, eine fortschreitende Verbuschung ist hier aber sichtbar. Ein z. Z. trockener Graben führt hier in Süd- Nord- Richtung durch den Biotop. Nur kleinflächig (relativ zentral gelegen) ist eine Brennnessel- Sumpfsseggen- Staudenflur (VHF < 1 %) vorhanden, eher kleine Bereiche werden von Brennnessel- Grauweiden- Gebüschen eingenommen. Im Westen des Biotopes ist ein mittelalter Erlen- Bruchwald mit Sumpfssegge und Brennnessel in der Krautschicht ausgebildet. Bereiche mit Schwertilie und Nachtschatten sowie teilweise Wasserfeder nehmen ebenfalls einen größeren Flächenanteil ein. Im Südosten des Biotopes befindet sich auch ein kleinerer Bereich mit Erlen- Bruchwald. Neben nassem Nachtschatten- Steifseggen- Erlen- Bruchwald tritt hier auch entwässerter Rasenschmielen- Erlen- Wald sowie kleinflächig Pfeifengras- Faulbaum- Erlen- Wald auf. Der Biotop grenzt großflächig (im Süden und Westen) an ein mittels Luftbildcode erfasstes Grabengehölz, an einen Graben im Norden (Graben trennt den Biotop vom Deich) sowie an entwässerten Laubwald (im Nordwesten und Süden) und an Wiese im Osten. |  |  |  |  |  |                                                                                                                                                                                                                                                                            |  |  |  |  |  |                                                                                                                                                                                                 |  |                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |                                                                                                                                  |  |                          |  |                  |  |  |  |                    |  |  |  |  |  |
