| <b>Beschreibung / Besonderheiten</b><br>Das überstaute, nasse Weidengebüsch befindet sich in einer vermoorten Strecksenke (Waldsoll) in der nördlichen "Holzkoppel"und weist in seiner Krautschicht deckend flutenden Schwaden mit vereinzelt Steifsegge, Schein-Zyperngras- und Ufersegge auf. Die Gehölz-und Strauchschicht wird aus 4 Meter hohen jungen Grauweiden gebildet. Das Substrat besteht aus nassem, eutrophen, wenig gestörten Torf. In der Umgebung befindet sich ein höher gelegener Laubwald. |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
