| Der eutrophe, sehr feuchte bis nasse Feuchtgebüschkomplex liegt im tiefgründig vermoorten unteren Peenetal zwischen Relzow im Norden und Anklam im Süden.Zu etwa 80 % ist die Fläche von einem dichtgewachsenen Sumpfsseggen - Grauweidengbüsch bestanden. Kleinere Lichtungen werden von Sumpfsseggen-Staudenflur eingenommen. Im letzten Jahr wurden kleine Bereiche, die sich zungenartig in die Gebüschfläche erstrecken, gemäht und können als Sumpfsseggen-Kohldistelwiese angesprochen werden. Die Fläche grenzt im Süden an den Grenzgraben, sonst an eine extensiv genutzte Feuchtwiese. |  |                                                 |  |  |  |  |  |  |  |                                                       |  |  |  |  |  |                                                                |  |  |  |  |  |
