| <b>Beschreibung / Besonderheiten</b><br>Auf überwiegend vererdeten feuchten bis nassen Quelltorfen hat sich auf einem sehr flach nach Süden geneigten Hang ein Waldsimsen-Quellried mit Weißstraußgras, Gemeinem Gilbweiderich und Brennessel auf ca. 150 m² erhalten. Das Wasser fließt nach Süden in einen Graben ab, dort grenzt es auch an ein trockenes Gebüsch, ansonsten wird der Biotop von frischer Hochstaudenflur umgeben.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
