|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                        |           |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |   |                                  |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |  |           |  |   |  |  |   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                        |  |  |                   |  |  |  |      |   |   |   |                                                                                                                                           |   |   |   |   |   |   |                                                                                                                                        |   |  |  |   |                                                                                                                                                                                                                                      |   |   |  |   |   |   |   |   |   |   |   |   |   |   |   |   |                   |  |  |  |  |  |  |
| <b>Beschreibung / Besonderheiten</b><br>weitere Veg.-einheiten:<br>-----<br>Sumpfbloaugen-Hahnenfuß-Rispengras-Wiesenseggen-Feuchtwiese, Sumpfbloaugen-Moorlabkraut-Blasenseggen-Waldsimsen-Feuchtwiese, Brennessel-Waldsimsen-Mädesüß-Hochstaudenflur, Bachnelkenwurz-Honiggras-Gilbweiderich-Hochstaudenflur<br><br>In einer von Grünland, Erlen-Gruppe (im Norden) und Baumreihe (im Süden) begrenzten flachen Senke sind auf meso- schwach eutrophen und eutrophen sehr feuchten, wenig gestörten, flächig quelligen Torfen unterschiedlichste Feuchtwiesenaspekte ausgebildet und miteinander verzahnt. Es dominiert eine süßgrasreiche (Wolliges Honiggras, Rotschwingel, Wiesenrispengras, Wiesenschwingel) Waldsimsen-Feuchtwiese, die sehr artenreich ist (mit Moorlabkraut, Wiesenplatterbse, Mädesüß, Sumpfkraatzdistel, Kuckuckslichtnelke etc.). Immer wieder weist die Waldsimsen-Feuchtwiese meso- schwach eutrophe Nährstoffverhältnisse kennzeichnende Arten wie Wiesensegge und Sumpfbloauge auf. Die unterste Wiesenschicht wird teilweise durch einen dichten Bestand an Pfennig-Gilbweiderich gebildet. Im Westen des Biotopes werden die Nährstoffverhältnisse ärmer, hier sind mesotrophe Feuchtwiesentypen angesiedelt. So bildet Blasensegge zusammen mit Waldsimse, Wiesensegge, Hirsesegge und Sumpfbloauge einen dichten Wiesenaspekt, der ohne deutliche Abgrenzung in eine von Wiesensegge und Flammendem Hahnenfuß geprägte Feuchtwiese übergeht.<br>Den Nord- und Südrand bestimmen feuchte Hochstaudenfluren aus Mädesüß, Gilbweiderich und Sumpf-Pippau. Eine zunehmende Ruderalisierung erfolgt durch Ackerkraatzdistel und Brennessel. |                                                                                                                                                                                                                        |           |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |   |                                  |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |  |           |  |   |  |  |   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                        |  |  |                   |  |  |  |      |   |   |   |                                                                                                                                           |   |   |   |   |   |   |                                                                                                                                        |   |  |  |   |                                                                                                                                                                                                                                      |   |   |  |   |   |   |   |   |   |   |   |   |   |   |   |   |                   |  |  |  |  |  |  |
