| Im Südwestteil der Tongrube auf dem Ziegelwerder schließt sich an die verbuschende Feuchtwiese ein teilweise überstauter, nasser Erlen-Birkenbruchwald mit Wasser-Schwertilie und Wasser-Minze in der Krautschicht an. Am Südrand erstreckt sich unterhalb des grubenbegrenzenden Steilhangs die offene Wasseroberfläche eines flachen Abgrabungsgewässers. Auf der Westseite bildet ein Sumpfseggenried den Übergang zu sonstigen Feuchtwäldern. |  |                                                                                                       |  |  |  |  |  |  |  |                                                                                                                                                                                                                                     |  |  |  |  |  |                                                                                                                                                                    |  |  |  |  |  |                                                                                                                                                                                                                                           |  |  |  |  |  |                                                                                                      |  |  |  |  |  |
