| <b>Beschreibung / Besonderheiten</b><br>Kleiner Erlenbruchwald südlich des Wildgartens in Lehsen;<br>Die mehrstämmigen Erlen weisen Stelzwurzeln auf. Eine Krautschicht fehlt weitgehend.<br>Der Wald ist wohl im Frühjahr vollständig überstaut. Die mittelalten Erlen sind größtenteils mehrstämmig. Der Wald steht auf staunassem Torf und Antorf über Lehm.<br>Besonders im Westen tritt eine lückige Strauchschicht auf.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                            |
