| <b>Beschreibung / Besonderheiten</b><br>Im Übergang von einer z.T. steilen Ackerfläche zur ebenen Niedermoorfläche tritt großflächig Drängewasser aus und führte zur Ausbildung eines Bruchwaldes. Die Quellen sind besonders im Zentrum sehr ergiebig. Kleine Wasserläufe durchziehen diesen Teil des Waldes. Ihre Sohle ist von Eisenocker bedeckt, das Wasser hat z.T. einen Ölfilm. In Nähe der ergiebigen Quellen hat sich ein Waldsimsen-Sumpfschilf-Erlen-Eschenquellwald entwickelt. In allen Wasserläufen findet man kleinflächig Fluren des Schmalblättrigen Merks. Auch das Schilf hat sich in der Riedfläche ausgebreitet. Die kleineren Schilfflächen dienen den Wildschweinen als Schlafplatz. Wildschweinspuren sind im gesamten Wald zu finden. Das Schilfröhricht ragt südlich aus dem Wald heraus. Grundsätzlich dominiert die Erle, die im Zentrum des sehr nassen Quellgebietes von einer kleinen Birkengruppe unterbrochen wird. Auf der etwas höher gelegenen Fläche zum Acker findet man vereinzelt Eiche und Birke. Der Ostteil des Waldes ist trockener. Auch hier ist die Sumpf-Segge zusammen mit dem Schilf noch dominant, jedoch wird der Anteil der Brennessel höher. Das Biotop wird durch einen Graben, der es im Norden umschließt, teilweise entwässert. Seine Sohle ist zum großen Teil mit einer Brunnenkressenflur bedeckt und hat Verbauungselemente. Auf der Böschung dominieren der Bunte Hohlzahn und Brennessel unterbrochen von Schilf und Kohl-Kratzdistel. In den Wald hineinragend hat sich eine Brennesselflur entwickelt. Der Wald hat einen hohen Totholzanteil, sowohl stehend als auch liegend, mit aufgerichteten Wurzeltellern. |                                               |           |   |                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                     |   |   |                                                                                                                                                                                          |   |                                                                                            |                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                          |                       |                                                                                                           |                                          |                          |                                        |                          |                                                                                                                                                                                                                   |                                     |                                               |                          |                                                                                                                                                                                                                                      |                          |                                    |                                     |                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |   |                                                                                                                                                                                                                                      |   |   |   |   |   |   |   |   |   |                          |                                  |                          |                            |                          |                  |                                     |                       |                                                                                                          |                              |                          |                                |                          |                                        |   |   |   |   |   |   |  |  |  |   |  |  |  |   |  |  |  |  |  |  |  |  |  |  |
| <b>Wertbestimmende Kriterien</b>
