| <b>Beschreibung / Besonderheiten</b><br>In einer Senke westlich vom Kleinen Kressinsee im Übergangsbereich der sandigen zur lehmigen Grundmoräne hat sich dieses mesotroph-saure Kesselmoor entwickelt, das zwischenzeitlich entwässert wurde, sich aber heute aufgrund des hohen Wasserstandes in Regeneration befindet. Es ist derzeit nicht begehbar. Der Randsumpf wird von einem lückigen Flutrasen aus Flutendem Schwaden eingenommen, zu dem in Bereichen mit niedrigerem Wasserniveau auch Walzenssegge gehört. Das Moorzentrum bestimmen Gehölzstadien, vor allem der Birke, aber auch der Ohrweide. Vor allem Flatterbinse prägt die Bodenvegetation, auch Walzenssegge nimmt noch einen hohen Anteil ein. Bereiche mit fortgeschrittener Regeneration sind torfmoosreich.<br>Ein Flatterbinsen-Schnabelseggen-Ried, zu dem auch Torfmoose gehören, besiedelt kleinflächig ausgebildet die Übergangsbereiche zwischen Randsumpf und der Gehölz-/Gebüschfläche.<br>Im SO liegt innerhalb der Senke ein entwässerter Birken-Moorwald der ausgegrenzt wurde. Ansonsten begrenzt Laubwald frischer Standorte das Kesselmoor. |   |                                                                                                                                                                                                                                                                      |   |                                                       |                                                                                                                                                                                                                        |                            |                                                                                                                                                            |                                     |                                                                                                                                                            |   |         |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                    |  |   |   |   |   |   |   |   |                                                                                                                                                     |  |   |   |   |                                 |  |                          |  |
