| Das Biotop liegt in einer tiefen, ovalen Senke der Endmoräne und stellt aus hydrologischer Sicht ein Kesselmoor dar.<br>Die Kesselsohle wird von etwa 5 m hohem, lichten Birkenmoorwald mit Schwingrasen eingenommen. Die randliche Sumpfbzone bilden Flutschwad-Walzensegnenriede. Auf den Kesselböschungen breitet sich der Gehölzsaum aus, in dem sich die Lesesteinhaufen befinden. Die Lesesteine sind mit verschiedenen Braunmoosen und anderen Moosarten dicht besetzt.<br>Gefährdungen durch Stoffeinträge bestehen nicht, da das Kesselmoor von Laub- und Nadelforsten umgeben ist. An dem nördlich am Biotop vorbeiführenden Weg wurde Müll auf der Wegböschung abgeladen. |  |  |  |  |  |                                                  |  |  |  |  |  |                                                          |  |                                                                                                                        |  |  |  |                          |                                                         |  |                                       |  |  |                                          |  |                                                         |  |  |  |  |  |  |                                                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
