| <b>Beschreibung / Besonderheiten</b><br>Der Erlen-Eschen-Bruchwald hat sich in einer Senke der Grundmoräne auf torfigem bis antorfigem Substrat gebildet. Zur Zeit der Kartierung war das Biotop etwa 10 cm hoch mit Wasser gefüllt. Von Westen her wird der Bruchwald von einem intensiv gepflegten Graben umgeben. Im Nordosten verläuft ebenfalls ein Graben. Hier grenzt ein Eschen-Ulmenstreifen und dann Feuchtgrünland an, in welchem mehrere Gräben zur Entwässerung enthalten sind. Der Erlen-Eschenwald besteht aus verschiedenen Gesellschaften in der Krautschicht (Schwertlilie, Großsegge mit Hexenkraut, Rasen-Schmiele mit Sumpf-Seggen oder Mädesüß). Die Gesellschaften wechseln mosaikartig. Das Kleinrelief und ebenso der Wasserstand sind, der Krautschicht nach zu urteilen, schwankend. Der nasse Erlen-Birkenbruch befindet sich am Südostrand des Biotopes. |   |   |   |   |  |   |  |   |  |   |   |   |   |   |   |   |   |   |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |   |   |   |   |   |   |   |   |   |   |   |   |                   |  |
