| Beschreibung / Besonderheiten Relativ artenarme, extensiv beweidete Herzblatt-Pfeifengrasweide innerhalb eines Wacholderbestandes südlich des Müritzhofes auf der Seeterrasse der Müritz. Der Standort ist wechselfeucht. Als typische Elemente der Pfeifengraswiese treten Herzblatt, Blutwurz und Weidenblättriger Alant auf, weitere Arten fehlen weitgehend. Da die Fläche nicht ausreichend beweidet ist, ist sie durch Vergrasung gefährdet. Pfeifengras bildet schon bis zu 20 cm hohe Bulte, Rasenschmiele tritt in höherer Deckung auf. Die Beweidung sollte verstärkt werden, ggf. sollte eine Mahd durchgeführt werden. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
