| <b>Beschreibung / Besonderheiten</b><br>Am Ostufer des Rederangsees erstreckt sich ein zumeist schmaler Röhrichtsaum vor den Bruchwäldern bzw. den Ufergehölzen, der zumeist als Schneiden-Schilfröhricht ausgebildet ist. Dabei treten auch mosaikartig eingestreute Schilfröhrichte auf, in denen Schneide nur noch vereinzelt beigemischt ist, die aber aufgrund der Geländebeziehungen nicht auskartierbar sind. Im südöstlichen Bereich der Fläche tritt in einer Seebucht eine breite Röhrichtzone mit Schneidenrieden auf. |   |   |                                     |  |  |   |   |   |   |   |   |   |   |   |   |   |   |   |  |  |  |  |  |  |  |  |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |   |   |   |   |   |   |   |   |   |   |   |
