| <b>Beschreibung / Besonderheiten</b><br>Östlich von Dambeck zwischen Röth- und Dambecker See sind mehrere, zum Teil schon ruderalisierte Sandmagerrasen ausgebildet. Die Kuppen und Höhenrücken der welligen sandigen Endmoräne hagen bevorzugt aus. Es scheint jedoch keine jährliche Mahd des extensiv genutzten Landes zu erfolgen. Auf der Höhe 96,0 zieht sich ein größerer Sandmagerrasen die Hänge hinab, der in Teilen ruderalisiert. Glatthafer, Jacobs Greiskraut oder Schafgarbe bedrängen die biotoptypische Vegetation. Bemerkenswert sind die Vorkommen der Kleinen Eberwurz, der Heidenelke und der Sand-Grasnelke. Stellenweise ist die Vegetation sehr lückig, so dass auch Silbergraspionierfluren auftreten. |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                |  |  |  |  |   |   |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |   |   |   |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |
