| Beschreibung / Besonderheiten Kleiner, nasser mesotropher Bruchwald SO Blankenförde am S-Ufer des Kleinen Eichhorstsees in einer vermoorten Nische, die nach N zum See geöffnet ist und im W, S und O von Sanderhängen begrenzt wird. Nach O geht sie über einen niedrigen mineralischen Sattel zum Verlandungsmoor des Großen Eichhorstsees über. Der Bruchwald ist von Nadelwald, einem Weg und dem See im N umgeben, im O verläuft eine Hochspannungsleitung, deren Schneise ins Biotop reicht. Hier grenzt ein Trockenrasen an. In dem Verlandungsmoor herrschten zum Kartierzeitpunkt nasse Bedingungen, der Boden war flächig überstaut. Es ist ein einschichtiger, mittelalter Erlen-Bruchwald (etwa 18 m Höhe und 20 cm BHD) mit den beigemischten Nebenbaumarten Gew. Kiefer, Moor-Birke und Gew. Birke ausgebildet. Am Seeufer tritt Verbuschung aus Baumjungwuchs auf, und auf der Schneise am O-Rand kommt dichter Erlen- und Birken-Jungwuchs auf. Die Bodenvegetation im Zentrum des Bruchwaldes besteht aus Pfeifengras, Torfmoosen, Wollgräsern und Seggen. Im Randbereich dominieren die Arten der nährstoffreichen Walzenseggen-Erlenbruchwälder. Erwähnenswert sind Bestände der Arten Schmalblättriges Wollgras und Faden-Segge. Liegendes und stehendes Totholz sowie Höhlenbäume sind in geringem Umfang vertreten. (Bewertung nach BfN-Schema, handschriftlich) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
