| <b>Beschreibung / Besonderheiten</b><br>Das kleine, gut erhaltene Kesselmoor befindet sich 250 m W der NW-Bucht des Zierzsees in einem System von drei miteinander verbundenen Senken in der kuppigen, endmoränennahen Sanderlandschaft, umgeben von struktureichem Laubmischwald. Im N kreuzt ein Waldweg auf einem flachen Sattel. Auf dem nassen, mesotroph-sauren Moor sind Torfmoos-Seggenriede mit Beständen von v.a. Schnabel-Segge ausgebildet, in den zentralen Bereichen kommt das Scheidige Wollgras zur Dominanz. Charakteristische Zwischenmoorarten sind ferner u.a. Faden-Segge, Grau-Segge und Schmalblättriges Wollgras. Kleinflächig kommen von Pfeifengras, Hunds-Straußgras und Torfmoosen bestimmte Bereiche vor. Im überstauten Randsumpf kommen nährstoffreichere Flutrasenarten sowie Wasserstern, das Lebermoos Riccia fluitans und Kleine Wasserlinse vor. Lückige Gehölze aus Kiefer und Birke sowie zahlreiche Totholzstämme befinden sich im zentralen Bereich und prägen das Biotop. Der Schlenkenanteil ist insgesamt hoch. Die Ränder werden meist von den Laubbäumen beschattet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                      |                                                                                                                                                                                                                                                                                                                                                                                 |   |                                                                                                                                                                                   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                      |                                                                                                                                                                                                                                                                                                                                                                                                      |   |   |   |   |   |   |   |   |   |   |   |   |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |   |   |   |   |   |   |   |   |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |
