| <b>Beschreibung / Besonderheiten</b><br>Vegetationseinheiten < 1%: Brunnenkressen-Erlen-Quellwald (WNQ), Sumpfseggen-Schilf-Quellröhricht (VQR), Brennessel-Schilfröhricht (VRL)<br><br>Naturnaher geschwungener bis geschlängelter Bach, der sich im Oberlauf bis 4 m tief in den lehmigen Untergrund eingeschnitten hat und hier sehr schnell unter starkem Rauschen in nordwestlicher Richtung dem Tollensesee zufließt. In diesem Abschnitt kommen einzelne größere Steine im ansonsten sandig bis schottrigen Bachbett vor. Die Ufer werden meist beidseitig von Bruch- und Silberweiden sowie Erlen gesäumt. Hier finden sich einige Exemplare der Wiesenschlüsselblume. Im Unterlauf ist der Bach weniger tief eingeschnitten und etwas ruhiger fließend, wobei einige kleine Geländestufen vorhanden sind. Unter einem querenden Weg ist der Bach auf wenigen Metern verrohrt, an einer anderen Stelle führt ein schmaler Wanderweg auf einer Holzbrücke über den Bach. Im Nordwestteil des Biotopes öffnet sich das Bachtal. Hier wachsen auf lehmigen, antorfgen und vermoorten Standorten verschiedene Erlen-Feuchtwälder und Grauweidengebüsche. Auf den feuchten bis sehr feuchten Standorten wird die Krautschicht von Rasenschmiele, Bachnelkenwurz, Sumpfsegge und Stinkendem Storchschnabel bestimmt. Vor allem westlich des Hauptbaches kommt Sumpfseggen-Erlenbruchwald auf sehr feuchten Standorten vor. Eingestreut sind immer wieder quellige Bereiche, die an mehreren Stellen in kleine Quellflüsse übergehen. Ein Teil dieser Sickerquellenstellen ist mit Brunnenkresse oder Milzkraut bewachsen. An einer Stelle ist etwas Brunnenkressen-Erlen-Quellwald ausgebildet. Der Bruchwald ist an vielen Orten mit Erlen-Feuchtwald verzahnt, der von Rasenschmiele, Kratzbeere und Himbeere bestimmt wird. In der Strauchschicht ist öfter Hasel vertreten. Diese Bereiche sind überwiegend als Ufergehölze der Bäche geschützt. Westlich des Hauptbaches sind die Erlengehölze oft von Grauweidengebüsch mit Sumpfseggen und Brennesseln in der Krautschicht gesäumt. In diesem Teil des Biotopes wächst ein kleines Sumpfseggen-Schilf-Quellröhricht auf sehr feuchtem Torfstandort. Es geht an den weniger gut mit Wasser versorgten Rändern in Brennessel-Schilfröhricht über. |   |                                                                                                                                                                                                                                                                                                                                                                                       |   |   |                                                             |   |                                                                                                                                                                                                                                                                                                                                |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |   |                                                                                                                                                                                                                                                                                                                             |   |   |   |                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                   |   |   |                                                                                                                                                |   |   |   |                                                                                                                                                         |   |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                |   |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |
