| Zum vermoorten Niederungsgebiet der "Alten Elde" gehörende extensiv beweidete Feuchtwiese auf feuchten - sehr feuchten vererdeten Torfen. Schlanksegge prägt den Feuchtwiesenaspekt. Sie ist mit Rasenschmiele, Kriechendem Hahnenfuß, Glieder- und Flatterbinse, Sumpfrispengras, Rohrglanzgras, Waldsimse etc. vergesellschaftet. Immer wieder ist gestörtes Feuchtgrünland als Flutschwaden-Wiese, Hahnenfuß-Rasenschmielen-Wiese, Rohrglanzgras-Wiese ausgebildet, mit der Schlankseggen-Feuchtwiese verzahnt. Die erfaßte Feuchtwiese wird im Süden durch einen parallel zur Müritz-Elde-Wasserstraße verlaufenden Graben, ansonsten aber von gestörtem Feuchtgrünland begrenzt. |  |  |  |  |  |                                                                                                                                                                                                          |  |  |  |  |  |                                                       |  |                                                                                                                                                                                                                                            |  |  |  |  |  |              |                                                                                                                |  |            |  |                                                                                                                |  |  |  |                 |                 |  |  |                 |  |  |  |  |  |                                |  |  |  |  |  |  |  |  |
