| <b>Beschreibung / Besonderheiten</b><br>Zu einer innerhalb der Ackerlandschaft liegenden lücken- und gehölzreichen Niederung ist im Bereich einer aufgelassenen Feuchtwiese eine Hochstaudenflur auf feuchten - sehr feuchten, ehemals quelligen, vererdeten Torfen angesiedelt. Der Standort ist flach nach Norden und Westen geneigt. Es dominieren Aspekte der Waldsimse (vor allem im Südteil) und der Rispensegge (vor allem im Nordteil), die jeweils brennesselreich sind. Weitere Arten sind u. a. Gilbweiderich, Mädesüß, Rohrglanzgras, Sumpfkatzdistel und im Nordteil auch Ackerkratzdistel. Am Nordrand quert ein flacher Graben die feuchte Hochstaudenflur. Auch gestörte Hochstaudenfluren gehören kleinflächig aber stetig ausgebildet zum Biotop. Großflächig begrenzt Ruderalflur den Feuchtbiotop. Kleinflächig grenzen Gehölze (Gebüschgruppe im SW, Erlen-Feldgehölz im NO, Hecke im Osten) an. |   |                                                                                                                                                                                                                                                                                    |   |                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                          |                                    |                          |                          |                  |                                                                                                                                   |                                                                                                                                  |  |  |  |   |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                |  |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |  |  |  |                                 |  |                                                                                                                                     |  |   |   |
