| <b>Beschreibung / Besonderheiten</b><br>Am Ost-Rand einer langgestreckten gebüsch- und heckenreichen Niederung ist in einer Quellnische ein Mosaik aus Grauweiden-Gebüsch, Weidengehölz und Hochstaudenfluren ausgebildet. Es dominieren auf den wenig gestörten Quelltorfen die Grauweidengebüsche, deren Bodenvegetation u. a. Brunnenkresse, Teich- und Wiesenschachtelhalm, Kohlratzdistel und im lichten Übergang zu einer westlich gelegenen Quellstaudenflur auch Schnabelsegge prägen. Die hier angesiedelte Quellstaudenflur ist artenreich, es sind vor allem Waldsimse, Bachnelkenwurz, Mädesüß, Teichschachtelhalm und Kohlratzdistel charakteristisch. Weitere kleinflächige Hochstaudenfluren aus Mädesüß und Waldsimse befinden sich an quelligem Antorf im Mittelteil des Biotopes mit Grauweiden-Gebüsch verzaht, südlich und nördlich des zum Biotop gehörenden Grabens.<br>Einen hohen Anteil nimmt ein Gehölz des Bastardes aus Silber- und Bruchweide ein, dessen Bodenvegetation Brunnenkresse, Mädesüß und Kohlratzdistel bilden. Im NW und Süden grenzt der Feuchtbiotopkomplex an aspenreiche Feldgehölze. Im O und NO grenzen Gebüsche an. Weiterhin begrenzen Ruderalfluren großflächig den Biotop. |                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                  |                                    |      |             |                          |                       |                          |                                          |                          |                                        |                                 |                                           |                 |                                               |                          |                                               |                          |                                    |                          |                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |   |                                                                                                                                                                                                                                                                                                              |   |   |   |   |   |   |                          |                                  |                                                                                                                          |                            |                          |                  |                          |                      |                          |                              |                          |                                |                          |                                        |
