| <b>Beschreibung / Besonderheiten</b><br>Wunderbares, sehr gut erhaltenes, großflächiges und sehr naturnahes Sauer-Armmoor (Sauer-Zwischenmoor). Wahrscheinlich handelt es sich dabei um ein Verlandungsmoor. Sehr guter Zustand mit hohen Wasserständen, wenig Gehölzaufkommen. Es tritt ein flächendeckender Torfmoosrasen auf mit Massenvorkommen von Schnabelried und Rosmarin-Heide.<br><br>Eine Aufforstung der umgebenden Flächen sollte unbedingt zwecks Grundwasserneubildung und Erhalt des oberirdischen Einzugsgebietes unterbleiben. |   |                                                                                                                                                                                                                                                                                                                |                                                                                                           |       |                                                                                                                                                                                                                                                                                                |                                                                                                           |                                         |                                                                                                          |                                                                                                                                                        |  |                                                                                                           |                                                                                                                |  |   |   |                                                                                                                                                  |  |   |   |                                                                                                                                                                                                                                                                                                                                                                                |   |   |   |   |   |   |   |   |                                                                                                                                                           |  |   |   |   |   |
