| <b>Beschreibung / Besonderheiten</b><br>Sehr schön ausgebildete Verlandungszone mit großflächigen Schwingdeckenstandorten und nassem bis sehr nassem Erlenwald in einer Bucht am Nordufer des Kleinen Pälitzsees.<br>Die eutrophen Schwinggrasstandorte sind sehr strukturreich, mit starker Bultbildung und Versauerungszeigern. Auf den Bulten treten zahlreiche mesotraphente Arten auf.<br>Die Randbereiche sind bereits als Standmoor ausgebildet, auf den jüngeren Schwingdeckenstandorten findet starker Erlen-Aufwuchs und Erlenverbuschung statt (Erlen bis zu ca. 5 m hoch).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                               |                          |                                        |
